risk 1 does not mean a risk-free investment. This indicator may change over time.	Principles for Responsible Investment		

**Monocle Fund** is a flexible fund whose main objective is to protect and develop the assets of its holders. To achieve this goal, the fund invests in the fixed income markets (min 51%) and in the equity markets (max 49%). The fund is classified as Article 8 SFDR.

Monocle's management methodology is the "reserve strategy", which consists of 1) holding reserves when asset prices are high and 2) deploying these reserves when asset prices fall. This strategy mechanically leads to a counter-cyclical exposure of the fund, which gives more control in bear markets. The management style is "value", with a resolutely "bottom-up" approach on essentially two geographical zones (Europe and North America) with a majority of large-cap companies and a reduced number of lines.

The fund recorded a decline of 2.85% in February, while the S&P 500 fell by 1.42% and the CAC 40 gained 2.03%.

On the negative side, we find this month:

6% 8% 10%

0% 2% 4%

-Moderna which cost us 80bps. It continued to suffer from political announcements and the appointment of Robert F. Kennedy Jr. as head of the Ministry of Health.

-10%

-5%

Peak to through difference on the period

0%

-Bumble made us lose 70bps. The stock reacted badly to the publication of the results and the drop in paying users. Its founder and CEO, back at the helm, announced that she would delete a hundred thousand accounts that were hampering its smooth operation in order to improve the experience of other users and then see their number grow.

-The other detractors were Alphabet and Ginkgo each costing us around 50bps. Capri, after disappointing results and without giving any news on the sale of one of its luxury brands, impacted the fund by 40bps.

On the positive side, Galapagos brings us 60bps. It has recovered after the unjustified decline following the announcement of the separation into two entities. The valuation still remains at half of the cash on the balance sheet. Aurora makes us gain about 25bps after its publication.

At the end of February, our net equity exposure is approaching 35% while our exposure to corporate credit remains at 16% (spreads
