**Monocle Fund** is a flexible fund whose main objective is to protect and develop the assets of its holders. To achieve this goal, the fund invests in the fixed income markets (min 51%) and in the equity markets (max 49%). The fund is classified as Article 8 SFDR.

Monocle's management methodology is the "reserve strategy", which consists of 1) holding reserves when asset prices are high and 2) deploying these reserves when asset prices fall. This strategy mechanically leads to a counter-cyclical exposure of the fund, which gives more control in bear markets. The management style is "value", with a resolutely "bottom-up" approach on essentially two geographical zones (Europe and North America) with a majority of large-cap companies and a reduced number of lines.
