Monocle Fund is a flexible fund whose main objective is to protect and develop the assets of its holders. To achieve this goal, the fund invests in the fixed income markets (min 51%) and in the equity markets (max 49%). The fund is classified as Article 8 SFDR.

Monocle's management methodology is the "reserve strategy", which consists of 1) holding reserves when asset prices are high and 2) deploying these reserves when asset prices fall. This strategy mechanically leads to a counter-cyclical exposure of the fund, which gives more control in bear markets. The management style is "value", with a resolutely "bottom-up" approach on essentially two geographical zones (Europe and North America) with a majority of large-cap companies and a reduced number of lines.

Downside Volatility

Weekly volatility on - moves only.

Maximum Drawdown

Peak to trough difference on the period.

Fund Managers Comments

The fund gained more than +2.5% in July, driven by Galapagos (+21%) and Moderna (+7%). Ultimately, the market is saying that perhaps we won't be cured solely by drinking cool water and going for walks, as recommended by the current US Secretary of Health, the inimitable RFK.

Equity exposure remains at 20%, exposure to the US dollar at 11%; valuations are high—even if anything can happen with Trump, the Fed, and AI, there is more risk of getting hurt when valuations are high. Translated with DeepL.com (free version)
